

## SOFTWARE TESTING

“Poor testing is one of the four leading causes of schedule and budget overrun and outright cancellation of projects”

- Caper Jones, in his book Estimating Software cost.

More than half of all software projects fail to meet objectives or suffer significant schedule and/or budget slippage because defects are discovered too late. Studies show that bugs found during test execution are about 50 percent costlier to fix than the ones found during the requirements capturing phase. The cost of fixing them can increase exponentially if the bugs are found and fixed post production.

These days when the profits for most of the organizations are shrinking, it is imperative for IT organizations to deliver cost effective and high quality systems in lesser time.

“How much time and money have you spent on resolving last minute defects discovered before release- or worse yet by your customers?”

Whether you are an executive in the organization or the Test manager responsible for the quality of you the company’s products, this is an important question which needs answer.

From improving test processes to overcoming specific test challenges, our consulting services are tailored to your needs end ensure to deliver results. Our team of certified software testing experts has proven records of delivering the high quality and cost effective testing solutions to some of the very large organizations each implemented using different methodologies and spanning across various domains round the globe.

The domains we have proven our competency include: Pharmaceuticals, Telecom, Automobile, Finance, Travel, e-Learning & Loyalty Management in retail sector.

A snapshot of our services offering is as follows:

Behavioral & Non- behavioral testing:

Functional

Load/Stress/Performance

Globalization and localization testing

Accessibility • Usability

Configuration and Compatibility testing

Installation testing • Beta testing

Third party validations and acceptance testing

Standards and Compliance testing

Logo Testing

Test Automation

In today's world of less time to market and pressure to reduce the cost, automated testing is a strategic step. Automation reduces the testing cycle times while enhancing the quality of testing. This further enables the testing team to focus on the deeper aspects of testing.

Our test automation services include:

ROI

Test Tool Identification

Automation Strategy Creation

Automation frame work design and development

Development & design of automation scripts.

With our comprehensive experience in automated testing, we have pioneered in developing and implementing automation initiative at various stages of testing lifecycle e.g.:

Functional and Regression testing.

Performance test automation
